Conclusion

# Introduction

- Ad-hoc models initially used
- Need for formal estimation model
- Lines of code easily understood metric
- 1970 – SLIM (Putnam)
- 1979 – Function Points (Albrecht)
- 1981 – COCOMO (Boehm)

Conclusion

# How do you estimate SLOC?

- Experience
- Previous system size
- Existing system size
- Breaking system into pieces

From "Schaum's Outline of Software Engineering" by David Gustafson

Function Points

Conclusion

# How do you estimate SLOC?

- For each piece estimate
  - ☐ Smallest possible SLOC -  $a$
  - ☐ Most likely SLOC -  $m$
  - ☐ Largest possible SLOC -  $b$

From “Example of an Early Sizing, Cost and Schedule Estimate for an Application Software System” by L. H. Putnam

# How do you estimate SLOC?

- Expected SLOC for each piece

$$E_i = \frac{a + 4m + b}{6}$$

- Total Expected SLOC

$$E = \sum E_i$$

From “Example of an Early Sizing, Cost and Schedule Estimate for an Application Software System” by L. H. Putnam

Conclusion

# What are function points?

- Functions of a software system
- 5 Categories
  - ☐ External Input
  - ☐ External Output
  - ☐ Internal File
  - ☐ External Interface
  - ☐ External Inquiry

# What are function points?

[Intro](#)[SLOC](#)[Function Points](#)[Conclusion](#)

# Unadjusted Function Points (UFP)

	Low	Avg.	High
External Input	___ x 3	___ x 4	___ x 6
External Output	___ x 4	___ x 5	___ x 7
Internal File	___ x 7	___ x 10	___ x 15
External Interface	___ x 5	___ x 7	___ x 10
External Inquiry	___ x 3	___ x 4	___ x 6

$$UFP = \sum_{i=1}^3 \sum_{j=1}^5 w_{ij} x_{ij}$$

# Value Adjustment Factor (VAF)

$$VAF = 0.65 + 0.01 \bullet \sum_{i=1}^{14} r_i$$

where  $r_i$  is the rating of factor  $i$

Conclusion

# Function Points Model

## Advantages

- Estimation data available early
- Language and implementation independent
- Non-technical estimation

## Disadvantages

- Difficult to automate data collection
- Possible subjective counting of function points

# SLOC-based Models

## Advantages

- Easy to automate data collection
- Easy to understand SLOC concept

## Disadvantages

- Highly subjective estimate of SLOC
- Highly dependent on experience
- Difficult calibration for a non-native environment

# Conclusion

“ ...even the current cost is small relative to the large sums spent on software development and maintenance in total, and managers should consider the time spent on FP collection and analysis as an investment in process improvement of their software development capability.”
